

INSTRUCTIONS TO AUTHORS

Cryptogamie, Algologie, Cryptogamie, Bryologie-Lichénologie; and Cryptogamie, Mycologie publish original papers, and reviews, on the systematics, biology and ecology of cryptogams (algae; bryophytes and lichens; and fungi, respectively). Manuscripts written in French, English, German, Italian and Spanish are considered providing suitable referees fluent in the language of the manuscript are available. Authors not writing in their first language should have manuscripts checked for grammar and syntax by a suitable person before submission. There are no page limits for papers. Publication will be facilitated if authors check carefully that the manuscript and illustrations meet the requirements outlined below.

Papers are reviewed by referees in whose field the paper lies. The choice of reviewers is at the discretion of the Editor. Final responsibility for the publication of papers rests with the Editor. Manuscripts that do not conform to instructions which follow will be returned for correction prior to review. On acceptance, papers become the copyright of the journal.

TEXT. — Manuscripts should be submitted to the Editor in triplicate, including the original copy. All parts of the manuscript must be typed double-spaced (including references and legends), on one side of the paper, with left margin of 4 cm. To minimize delays in publication, **authors should send the final version of their manuscripts on floppy disks (5 1/4, 3 1/2) using the DOS (IBM) or Macintosh format. In addition, the use of MS WORD would be appreciated.**

Each manuscript should include, in order:

— A title page containing the title of the paper and, if necessary, its English translation; the complete name and address of each author (including, as much as possible, fax number and e-mail address), and author to whom correspondence should be sent; a running title of less than 50 letters, and a list of key words;

— Two abstracts, the first in French (if necessary, some help can be provided by the Editorial Office), the second in English (a third one in the language of the text is accepted), each of no more than 180 words or 15 lines, summarizing the major results of the paper;

— The main text, followed by references, legends for figures, and tables, in that order.

The text should normally be divided into sections (e.g. Introduction, Materials and Methods, Results, Discussion, Acknowledgements, References) appropriate to the nature of the paper. Indent the first line of all paragraphs. Symbols, units and nomenclature should conform to international usage. The SI system should be used throughout. The first mention of the Latin name of a species in the text should be accompanied by the nomenclatural authorities. Consult the current issue of the Journal for style of headings, sub-headings and other conventions. Legends for figures, plates and tables should be self-explanatory, and written in the language of the text and in English if it is not the language used for the text.

REFERENCES. — References should be arranged alphabetically and then chronologically by author. Journals titles should be cited in full; and books, cited according to F.A. Stafleu & R.S. Cowan, 1976..., *Taxonomic literature*. Ed. 2. Utrecht/Antwerpen: Bohn, Scheltema & Holkema. Conventions of style are provided in the following examples (note that names of Chinese authors are written in full and listed in the style in accordance with the national change made in China in 1987; e.g. Chang C.F. becomes Zhang Junfu):

AJISAKA T., NORO T., TRONO Jr. G.C., YOUNG-MENG CHIANG & YOSHIDA T., 1994 — Several *Sargassum* species (subgenus *Sargassum*) in East Asia with furcately branching leaves. In: Abbott I.A. (ed.), *Taxonomy of Economic Seaweeds*. IV. La Jolla, California Sea Grant College, University of California, pp. 9-22.

ALBRECHT A. & REISE K., 1994 — Effects of *Fucus vesiculosus* covering intertidal mussel beds in the Wadden Sea. *Helgoländer Meeresuntersuchungen* 48 (2-3): 243-256.

MAGGS C.A. & HOMMERSAND M.H., 1993 — *Seaweeds of the British Isles*. 1 Rhodophyta. Part 3A Ceramiales. London, HMSO Books, The Natural History Museum, 464 p.

MONTAGNE C., 1838 — Centurie des plantes cellulaires exotiques nouvelles. *Annales des Sciences Naturelles, Botanique*, sér. 2, 9: 38-57.

In the text, references should be cited by the name of the author and the year of publication; use "et al." for more than two authors, and use "&" between two authors (e.g. Montagne, 1838; Maggs & Hommersand, 1993; Ajsaka et al., 1994).

ILLUSTRATIONS. — All illustrations should be mounted on white light-weight carbocard, with author's names and figure numbers on the verso. Each line drawing should be original, clearly drawn with black India ink, and of good quality; letters and numerals must be made with a lettering device (not with a type writer). Originals should not be more than three times the size of the final reduction (12.5 × 18 cm). Both drawings and tables should be ready for direct reproduction by offset. Authors should choose very carefully the thickness of lines, and character sizes, corresponding to final reduction. Three copies of all photographic illustrations (or an original and to laser photocopies) are required. Photographic figures should be ready for same-size reproduction: maximum page size is 12.5 × 18 cm. All figures should include scale bars and symbols necessary for their understanding, and they should be numbered consecutively, according to the order cited in the text. Color plates will be published only at the authors expense.

PROOFS. — Proofs should be checked and returned by airmail (if necessary, by fax) to the Editor within 48 hours of receipt. At this stage, corrections should be restricted to those arising from typesetting errors. If changes to illustrations are necessary at proof stage, new originals would have to be supplied and the cost for re-photographing will be charged to author at the discretion of the Editor. If proofs are not returned promptly, the article will be published without the author's corrections.

REPRINTS: not more than 150, of which 25 are free copies. Reprint orders are enclosed with proofs.
